                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
```

Nakamatsu T;

The present invention describes a coryneform bacterium (I) which has L-glutamine producing ability and has been modified so that its intracellular glutamine synthetase-activity-should be enhanced. Also described is a DNA (II) coding for a protein having glutamine synthetase activity or glutamine synthetase adenylyl transferase activity (see ABP53500 and ABP53501 respectively). (I) Is useful for producing accumulate L-glutamine in the medium and collecting the L-glutamine. L-glutamine in the medium and collecting the L-glutamine. L-glutamine produced by (I) is useful industrially as an ingredient of seasonings, as liver function promoting agents, in amino acid transfusions, and in comprehensive amino acid preparation. (II) is useful for breeding (I). The by-production of L-glutamic acid is suppressed and the production efficiency of L-glutamine is improved using (II). The present sequence encodes Brevibacterium lactofermentum glnA2 and glnE, which have glutamine synthetase activity and glutamine Coryneform bacterium which has L-glutamine producing ability and has been modified so that its intracellular glutamine synthetase activity should be enhanced, useful for producing L-glutamine Sequence 5500 BP; 1241 A; 1291 C; 1590 G; 1378 T; 0 other; synthétase adenylyl transferase activity respectively.

           The present invention provides a number of nucleotide and protein are queences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium coryneform bacterium and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium of an organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GlyLysIleAspThrValValLeuAlaCysValAspMetGlnGlyArgLeuMetGlyLys
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AsnLeuLysLeuLysGlyLeuPheAlaSerGluLeuGluPheAsnLeuPheAsnGluThr

                   pathway (MP) proteins given in AAB79634 to AAB80211. The C. glutamicum MP nucleic acids are useful for the production of fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, purine and pyrimidine abses, nucleosides, nucleosides, lipids, saturated and unsaturated fatty acids, diols, carbohydrates, aromatic compounds, vitamins, cofactors, polyketides and enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              515 ------CAAAGCCTTCGCACCAACGACTGCCACGTGTG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    263793
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        263742
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    263708 CCCACTGACAACGGCGGATATTTCGACCAAGCCACATTCAATGAGGCGCCGAATTTCCGT 263649
                                                                                                                                                                                                                                                                             The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium coryneform bacterium coryneform bacterium and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium coryneform bacterium in the carbon in the sequence acids, nucleic acids, the present sequence is a nucleic acid described in the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     185 ArgSerValArgAsnLysLeuGluGluAlaGlyIleLeuMetGluAlaThrHisProGlu 204

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      78
                                                                                                                                                                                                                                                                                                                                  φ
                                                                                                                                                                                                                                                                                                            neguence (ARA90521) and related proteins (ARB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The present invention describbes a polynucleotide a gequence of a Bifidobacterium genome selected from the mucleotide acquence given in ABQ81842 and ABQ81843, or a sequence exhibiting at least 90% identity or which hybridises with the sequence exhibiting at least 90% identity or which hybridises with the sequence exhibiting at least 90% identity or which hybridises with the sequence exhibiting a fusion protein, comprising a sequence selected from 1097 sequences given in ABB6528 to AB66534 ligated in frame to a polynucleotide [II] encoding a heterologous polypeptide. (I) has antidiarrheic_and activities, and can be used as an inhibitor of Salmonella. (I) which is a probe) is useful for the detection and/or identification of Bifidobacterium Bifidobacterium longum in a biological sample. A carrier ontaining the lactic acid bacteria and/or recating diarrhoea brought about by pathogenic bacteria and/or rotavirus. The carrier is a food composition selected from milk, yogurt, cutd, cheese, fermented milks, milk based fermented products, ice-creams, fermented cereal based products, milk based for tablets, infant formula, pet food or a pharmaceutical composition selected from tablets, liquid bacterial suspensions, dried oral supplement, wet oral supplement, dry tube feeding or wet tube feeding.

(I) is useful in DNA arrays or chips to carry out analysis of the bifidobacterium related nucleotide sequences given in the Sequence interesting from the present invention but not mentioned further within the contraction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          --ThrGlyTyrSerAspCys 80

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence was used in the development of a novel method for the production of vanillin.

The method comprises exposing trans-ferulic acid, or its salts, to trans-ferulate:CASH ligase, trans-feruloyl SCOA hydratase and 4-hydroxy-3-methoxyphenyl-beta-hydroxypropionyl-S-COA cleavage activities. A similar novel method in which vanillin is converted covanillic acid, or its salts, utilises a 4th enzyme, especially vanillin achid can be used to make oligomers, or as a monomer of vanillin acid can be used to make oligomers, or as a monomer of polyesters. By expressing vanillin in plants or food-grade microorganisms, vanillin is generated in situ during preparation of fermented foods and beverages. Transgenic plants, particularly food plants, may be able to produce other particularly food plants, may be able to produce other can ompounds in addition to vanillin. This method is less expensive than extraction from Vanilla pods, and generates a mail are to natural vanilla pod extract.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of vanillin from trans-ferulic acid using 3 enzymes - followed by oxidation to vanillic acid, useful as a food

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a protein (ABP25413-ABP30895) from group B streptcocccus/GAS (Streptcocccus agalactiae) or group A streptcocccus/GAS (Streptcocccus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABM66044-ABN1526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptcoccus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptcoccus in a biological sample. (I) is used to determine whether a compound binds to UI). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptcoccus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Streptococcus, GAS, GBS, group B streptococcus, Streptococcus agalactiae, group A streptococcus, Streptococcus pyogenes, antibacterial, gene, antiinflammatory, infection, vaccine, meningitis, gene therapy, ds.

                                                                                                         Etreptococcus (GBS (Streptococcus againstant) And Strengtococcus (GBS) (Streptococcus againstant) And Strengtococcus (GBS) (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABMS6044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to U). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5481 sequences (S1), given in the specification. The proteins have antibacterial and antihiflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and thodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a streptococcus mapple. (I) is used to detect Streptococcus in a composition comprising (I) or a nucleic acid encoding (I) may be used to accombinantly produce (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity contours and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -----GTACGGATCAATGAGTCAGATATG 207

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Description

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
